

SRORN CHANSOMPHORS

Backend Developer

Personal Profile

A motivated Software Development student eager to secure an internship in backend development, with a solid understanding of server-side programming, database management, and API development. I am passionate about building reliable, scalable backend systems and solving real-world problems through clean and efficient code. I enjoy contributing to meaningful projects and collaborating with a dynamic team to further strengthen my technical expertise and advance my career in software development.

Project Experience

April – June 2025

Korea Software

HRD Center

TestPilot – An All-rounded APIs Testing Platform

An online platform developed to address the growing need for a dependable and convenient way for developers to test their APIs. APIs play an extremely crucial part in the development of applications, making it essential for developers to ensure their APIs work correctly and with the desired outcome. TestPilot makes it easy for developers to perform validation checks on their APIs, offering predefined validation pattern for quick and convenient testing, and custom test cases for greater flexibility and control.

October – December 2025

AndroShield – Enterprise Mobile Device Management (MDM) System

A web platform that helps companies manage company android mobile devices. It allows admins to register devices, create work profiles, install or block apps, and apply security rules. The system supports features like remote lock/wipe, location tracking, notifications, and automated policy enforcement. Designed with a microservice structure so each function runs independently, making the system reliable, scalable, and easy to maintain.
